

GOLF BALL

ABSTRACT

A golf ball with a center and a cover layer formed over the center is disclosed. The center exhibits a high velocity and is soft with a compression of less than about 75. The cover layer is soft with a Shore D hardness on the ball of less than about 58. The cover layer includes an ionomer component and a metallocene polymer component. The ionomer component can be a single ionomer or a blend of ionomers. The metallocene polymer component can be a single metallocene polymer or a blend of metallocene polymers.
